

GET IT RIGHT EDU APP

GIREAPP

Product Requirements Document

Version 1.0

This document defines the product vision, functional requirements, user personas, user flows, and go-to-market strategy for GIREAPP - a departmentalised, gamified digital learning platform connecting students, professionals, and tutors across Africa and beyond.

1. Product Overview

Name: Get It Right Edu App (GIREAPP)

Purpose: A digital learning platform designed to provide easy access to quality education, structured learning, and mentorship without distance barriers.

1.1 The Problem Statement

Despite the proliferation of digital educational resources, learners worldwide face four major systemic pain points:

One-Size-Fits-All Cognitive Overload

Traditional e-learning platforms present cluttered, generic interfaces where high-schoolers, university students, and business executives navigate the exact same dashboard. This lack of academic departmentalisation leads to cognitive fatigue.

The 'Isolation Gap' in Online Education

E-learning is often a cold, isolated journey. Students suffer from a severe lack of emotional and psychological support with no direct bridge to counselling or mentorship within their digital learning workspace.

Low Engagement and Extrinsic Motivation Deficits

Without gamified feedback loops, continuous study becomes monotonous. Traditional portals fail to reward effort incrementally, neglecting to build study confidence and positive reinforcement.

Distance and Access Barriers

Quality education and premium tutoring are historically localised, expensive, and physically restricted, leaving remote, busy, or disadvantaged students without structured learning pathways.

1.2 Detailed Platform Description

GIREAPP is a comprehensive digital ecosystem that connects students, working professionals, and tutors. Its core differentiator is the ability to departmentalise and personalise the educational experience immediately upon sign-in based on a user's academic and professional standing.

The platform is structured across three primary tracks:

- **Secondary Level:** Tailored for high school students, further segmented into Science, Business, and Arts departments.
- **Tertiary Level :** Designed for university-level scholars, dynamically adapting for Undergraduates and Postgraduates.
- **Professional Level :** A specialised track for working adults, career changers, and lifelong learners, hosting industry-certified training programmes.

1.3 Core Capabilities & Personalised Portal Engine

Each learner is equipped with a personalised student portal serving as their learning cockpit. Through this portal, users can:

- Consume structured multi-format lessons (video, PDF, interactive text).
- Complete automated assessments (quizzes and formal exams).
- Monitor real-time academic growth via personal progress reports.
- Manage a digital wallet of points and badges via the Get It Right Gamification Engine, bolstering student confidence and keeping engagement high.

1.4 Holistic Student Support (Counselling & Mentorship)

Acknowledging that academic success is heavily dependent on emotional and mental well-being, GIREAPP features an integrated Counselling and Mentorship module. This provides students with direct, confidential access to verified mental-health professionals and career advisors to manage academic anxiety, exam stress, and career planning.

1.5 Administrator & Tutor Control Centre

For educators, the platform provides robust administrative utilities. Tutors and system administrators can create and manage courses, upload lessons, build custom quizzes, track student metrics, grade exams, and publish academic results in real time.

1.6 The Hybrid Execution Framework

GIREAPP is built using a Hybrid Design Thinking & Lean Startup Framework. Design Thinking informs learner-centred feature design (empathy, definition, ideation); Lean Startup governs rapid validation, prototyping, and continuous deployment based on empirical user data. This framework should guide sprint planning and feature prioritisation in subsequent development stages.

2. Target Personas

The following four personas were selected to represent GIREAPP's primary user segments: secondary learner, tertiary learner, professional learner, and tutor/administrator. Each persona captures distinct pain points that the platform is designed to resolve.

2.1 Secondary Learner — Tobi Ojo (Age 16)

Location: Ibadan, Nigeria

Track: Secondary — Science Department

Initial Mood: Overwhelmed, highly anxious, hyper-distracted, and feeling isolated

Tobi is a high school senior preparing for competitive university matriculation exams (JAMB & WAEC). His school has underfunded science labs and lacks specialised prep educators. Searching online, he encounters generic tutoring websites that surface college-level content, increasing his anxiety.

GIREAPP Solution: Tobi selects Secondary > Science. His dashboard shows only secondary-level Physics, Chemistry, and Maths. He completes an electromagnetism quiz, earns 50 points and a 'Current Master' badge, and books a session with a career mentor when feeling overwhelmed.

Design Note: Warm, anxiety-reducing gradients (deep indigos and soft coral accents). Clutter-free components. Gamified milestones trigger animated positive-reinforcement modals (green/yellow particles).

2.2 Tertiary Learner : Amina Bello (Age 21)

Location: Zaria, Nigeria (Ahmadu Bello University)

Track: Tertiary : Undergraduate (Sociology)

Initial Mood: Disconnected, academically stranded, time-crunched, and mentally exhausted

Amina is struggling with her research thesis. Her professors have hundreds of students and no time for 1-on-1 guidance. She commutes 45 minutes daily and needs bite-sized, offline-friendly modules that work perfectly on mobile.

GIREAPP Solution: Amina accesses offline-friendly reading modules on Qualitative Research Methodologies during her bus ride and schedules a virtual session with a postgraduate mentor via the Mentorship booking tab.

Design Note: Mobile-first layout, highly readable under transit lighting. Mentorship booking drawer is a smooth, low-friction bottom sheet.

2.3 Professional Track : David Mensah (Age 29)

Location: Accra, Ghana

Track: Professional : Data Analytics Certification

Initial Mood: Hurried, financially stressed (high data cost), intellectually impatient, career-stagnated

David works a demanding 9-to-5 but wants to transition into tech. Local mobile data is expensive, making heavy HD video unaffordable. Generic portals frustrate him by surfacing irrelevant beginner content.

GIREAPP Solution: David's dashboard shows only industry-grade Data Analytics modules. He toggles 'Data-Saver Mode' for optimised text-and-image lessons and monitors his certification-readiness progress.

Design Note: Prominent Data-Saver status toggle at the top of the interface. Sleek, minimal progress indicators - no unnecessary graphic animations.

2.4 Tutor / Administrator — Mr. Nelson Nkosi (Age 42)

Location: Johannesburg, South Africa

Role: Advanced Mathematics Tutor & Administrator

Initial Mood: Overworked, burnt out, lacking data-driven insight into student comprehension gaps

Mr. Nkosi manages over 150 students across regions. Manual grading consumes 10+ hours weekly and he has no scientific way of identifying which topics students collectively struggle with most.

GIREAPP Solution: He uploads a dynamic vector mathematics quiz via the Admin Portal. The platform auto-grades all 150 submissions and displays an analytics chart showing 60% of the class failed Question 8 (Cross Products), enabling a targeted review session.

Design Note: Desktop-optimised dashboard with clean tables, dark-mode capability, and immediate visual analytics charts (vertical bar graphs of aggregate weak topics).

3. Functional Requirements & User Stories

3.1 Authentication & Onboarding

Req 1.1: The system shall allow users to register and select their primary academic level (Secondary, Tertiary, Professional).

Req 1.2: Based on the primary selection, users must select a sub-category (e.g. Secondary learners select Science, Business, or Arts).

User Story: *As a new user, I want to create an account and specify my academic level so that the app only shows me content relevant to my needs.*

3.2 Personalised User Portal

Req 2.1: The system shall generate a customised dashboard reflecting the user's selected department.

Req 2.2: The portal shall display active courses, recent progress reports, and the user's point/badge balance.

User Story: *As a Secondary Science student, I want to log in and immediately see my Physics and Chemistry courses, rather than Professional training modules.*

3.3 Course Learning & Assessment Engine

Req 3.1: The platform shall support multi-format course delivery (text, PDFs, embedded videos).

Req 3.2: The system shall include an assessment engine capable of administering quizzes and structured exams.

Req 3.3: The system shall automatically generate progress reports based on completed modules and assessments.

User Story: *As a learner, I want to take quizzes at the end of each module to test my knowledge and see my results instantly.*

3.4 Gamification System (The Get It Right Engine)

Req 4.1: The platform shall award Points for granular achievements (e.g. passing a quiz, logging in consecutively).

Req 4.2: The platform shall award Badges for milestone achievements (e.g. completing a full course syllabus).

User Story: *As a student, I want to earn badges when I score highly on assessments so that I feel motivated to keep learning.*

3.5 Mentorship & Counselling Module

Req 5.1: The platform shall provide a dedicated space for users to request mentorship or counselling.

Req 5.2: The system shall allow users to schedule sessions with certified mentors/counsellors to support mental health and academic balance.

User Story: *As a user feeling overwhelmed by exams, I want to easily book a session with a mentor to discuss my academic anxiety.*

3.6 Admin & Tutor Dashboard

Req 6.1: Tutors shall have the ability to create, edit, and delete courses and modules.

Req 6.2: Admins/Tutors shall be able to monitor aggregate learner performance and release exam results.

User Story: *As a tutor, I want to see the average quiz scores of my students so I know which topics need further explanation.*

4. Summarised User Flows

The table below maps the five core flows within GIREAPP from entry point to completion.

Flow	Step 1	Step 2	Step 3	Step 4	Step 5
New User	Land on homepage	Select track (Secondary / Tertiary / Professional)	Register & verify email	Choose sub-category (e.g. Science, Undergraduate)	Land on personalised dashboard
Learner	Log in → personalised dashboard	Select course → consume lesson (video / PDF / text)	Complete end-of-module quiz	Earn points & badge (gamification modal fires)	View progress report → book mentorship if needed
Counselling	Click Mentorship tab from any dashboard screen	Browse verified mentor / counsellor profiles	Select slot via Calendly embed	Receive confirmation & calendar invite	Attend virtual session; session notes stored privately
Tutor / Admin	Log into Admin Portal	Create / upload course & lesson content	Build quiz (MCQ) with answer key	Monitor live student submission dashboard	Review analytics chart → schedule targeted review session
Result Release	Admin grades / auto-grades assessment	Admin publishes results	Students receive in-app notification	Students view results on personal portal	Progress report auto-updates

4.1 New User Registration & Onboarding

Entry point is the GIREAPP landing page or a referral/partner link.

1. Users select their track: Secondary, Tertiary, or Professional.
2. The user completes registration (name, email, password) and verifies email.
3. Users select sub-category (e.g. Science, Undergraduate Sociology, Data Analytics).
4. The system generates a personalized dashboard — only relevant courses and modules are visible.
5. Onboarding modal introduces the Get It Right Gamification Engine and the Mentorship tab.

4.2 Learner Core Loop

This is the primary repeat-use loop driving engagement and retention.

6. Learner logs in and lands on their personalised dashboard.
7. Learner selects an active course and consumes a lesson (video, PDF, or interactive text).
8. Learner completes the end-of-module assessment (multiple choice).
9. Gamification engine fires: points awarded on attempt, badge awarded on passing milestone.
10. Learner views updated progress report and certification-readiness indicator.
11. Optional: Learner clicks the Mentorship tab to book a counsellor or career advisor session.

4.3 Counselling & Mentorship Booking

The mentorship path is accessible from any screen within the learner dashboard. It is depicted in the optional side panel of the Learner Core Loop diagram above.

12. Learner clicks the Mentorship tab from any screen within the dashboard.
13. The system displays a directory of verified mentors and counsellors (filterable by specialisation).
14. Learner selects a profile and views available slots via the embedded Calendly widget.
15. Learner confirms booking and receives a calendar invite and in-app confirmation.
16. Session is conducted virtually; session notes are stored privately, access-controlled per user.

4.4 Tutor / Admin Content & Results Flow

Admin and tutor actions are handled via a separate portal, isolated from the learner-facing interface.

17. Admin logs into the Admin & Tutor Portal (separate from the learner portal).
18. Admin creates a course, adds lesson modules, and uploads content (video/PDF/text).
19. Admin builds a multiple-choice quiz with an answer key and assigns it to a course.
20. Students complete the quiz; results are auto-graded and populate the Admin analytics dashboard.
21. Admin reviews the aggregate performance chart (e.g. weak topic identification by question).
22. Admin publishes results; students receive in-app notification and view results on their portal.

GIREAPP | Admin and Tutor Management Flow

5. Minimum Viable Product (MVP) Scope

The MVP (current build stage) focuses strictly on core functionality to enable a fast time-to-market and early empirical feedback collection.

- User registration with routing to correct Secondary / Tertiary / Professional dashboards.
- Viewing and reading one foundational course per segment.
- Taking a multiple-choice assessment at the end of the course.
- Earning basic points and badges for passing the assessment.
- A simple contact-form integration for requesting counselling sessions.
- A basic admin interface to manually add courses and view user scores.

Deferred to next stage: Video streaming, complex forum discussions, live chat, in-app payments, and automated AI grading for essay-style questions.

The design team should proceed using the MVP definition (contact/request form only) while ensuring the architecture and user flow can accommodate future expansion into a full counselling platform as stated in section 1.4.

6. Non-Functional Requirements

- **Scalability** - Architecture must efficiently handle concurrent users, especially during peak assessment periods.
- **Accessibility** - UI/UX must be responsive, working seamlessly across desktop and mobile devices.
- **Security** - User data, especially regarding academic performance and private mentorship/counselling records, must be encrypted and strictly access-controlled.
- **Performance** - Course content loading times must be below 2 seconds to accommodate users in regions with slower internet bandwidth.
- **Data Privacy Compliance** - The platform must comply with applicable data protection regulations including NDPR (Nigeria) and POPIA (South Africa), given the target user base. A formal compliance review is recommended before public launch.

7. Go-To-Market (GTM) Strategy

7.1 Target Audience (Early Adopters)

- **B2B / Partnerships** : High schools and private tutoring centres seeking a white-labelled or partnered digital learning solution.
- **B2C / Direct to Student** : High school seniors preparing for university entrance exams who need immediate structured guidance.

7.2 Value Proposition & Messaging

For Students: "Get It Right the First Time. Personalised courses, interactive gamification, and instant mentorship to guarantee your academic success."

For Institutions: "A plug-and-play digital campus. Monitor your students' progress and well-being in one unified dashboard."

7.3 Launch Timeline

- **Alpha Testing (Internal)** :Thorough MVP testing with 10–20 selected students to identify critical bugs in the Assessment and Gamification engines.
- **Beta Launch (Soft Launch)** : Release to a specific partner school or university department. Gather feedback on usability and content effectiveness.
- **Official Launch (V1.0)** : Public release with targeted social media campaigns (Instagram/TikTok for students, LinkedIn for professionals/tutors).

7.4 Acquisition Channels

- **Institutional Partnerships** : Direct sales to schools to bulk-onboard their student base.
- **Social Proof & Gamification Loop** : Encourage students to share earned badges on social media to drive organic sign-ups.
- **Freemium Content SEO** : Free high-quality foundational modules that rank organically, upselling to full courses and mentorship.

7.5 Monetisation & Pricing Model

- **Freemium Model** : Basic access to limited generalised courses is free to lower the barrier of entry. Access tiers for MVP need to be explicitly defined (see Section 5).

- **Premium Subscription** : Monthly educational fee unlocks advanced modules, unlimited assessment attempts, and priority booking for counsellors/mentors.
- **Institutional Licensing** : Schools pay a flat annual fee based on student headcount for customised admin dashboards and bulk access.

8. Development & Industry Standards

8.1 Out-of-Scope Features (MVP)

The following are explicitly excluded from the MVP launch to prevent scope creep and ensure fast time-to-market:

- Live video streaming or real-time interactive classes.
- In-app payment processing (billing handled manually via invoicing for initial B2B partners).
- Complex social networking feeds or student-to-student messaging.
- Automated AI grading for essay-style questions (only multiple-choice evaluated initially).

8.2 Technical Stack & Third-Party Dependencies

Frontend Framework: React or Next.js for fast, responsive web delivery

Authentication: Firebase Auth or Supabase (handling strict role-based routing)

Video Hosting: AWS S3 or Vimeo (high-performance playback)

Mentorship Scheduling: Calendly Integration (embedded in the Mentorship widget)

8.3 Key Performance Indicators (KPIs)

Each KPI requires a defined measurement method and baseline before launch.

- **Course Completion Rate (CCR)** : Target 75% module completion within the first 30 days. Measured via: completion events tracked in analytics dashboard per enrolled user.
- **Gamification Engagement** : Target 5+ badges earned per active user per month. Measured via: badge award events aggregated monthly per user cohort.
- **Counselling Utilisation** : Target to be determined during alpha testing; measured by the percentage of users who click the Mentorship/Counselling call-to-action button during a session.

8.4 Risks & Mitigations

- Risk: Students abandoning assessments out of frustration.
- Mitigation: The Get It Right Engine awards points for attempting a test, reducing exam anxiety.
- Risk: Tutors not uploading enough course content pre-launch.
- Mitigation: Build 4 core hero courses (e.g. Physics, Maths) internally before launch so the platform never appears empty.

- Risk: Slow load times for video modules in low-bandwidth areas. Mitigation: Enforce strict video compression limits and offer text/PDF fallback options.
